EDUCATION

University of Central Florida

Bachelor of Science in Information Technology, Minor in Computer Engineering

Orlando, FL

Fall 2027

EXPERIENCE

Student Builder Campus Leader

Jan 2026 - Present

AWS (Amazon Web Services)

Orlando, FL

- Educated **100+** students on AWS microservices (**S3, DynamoDB, Lambda**) by designing and hosting 3 hands-on technical workshops, building custom **Python** seeding scripts to demonstrate live S3 operations and boost interactivity.
- Drove **100+** student sign-ups to the AWS Builder Center by executing organic social media campaigns that showcased hands-on technical usage of AWS technologies as the Student Builder Campus Leader at the University of Central Florida.
- Increased AWS Builder Center awareness among **200+** students by delivering **3** class announcements that displayed the perks of the AWS Builder Center and partnering with Knight Hacks, UCF's largest programming organization, to co-promote AWS services.

Hackathon Organizer

Jan 2026 - Present

Knight Hacks

Orlando, FL

- Participated in the planning and execution of a **1,000+** participant, **36-hour** hackathon, coordinating cross-functional teams, sponsors, and complex logistics across multiple venues for one of **Florida's largest** student-run collegiate technical events.
- Coordinated strategic processes between **sponsors and hackers**, strengthening collaboration, requirements gathering, and communication to align expectations and resolve issues quickly in a **high-pressure**, fast-paced environment.
- Designed and **delivered technical workshops**, challenges, socials, ceremonies, and sub-events, increasing participant engagement and creating hands-on learning experiences for both beginner and advanced developers across multiple skill levels and backgrounds.

Software Engineer Intern

May 2026 - Jul 2026

Publix Super Markets

Lakeland, FL

- Modernized and re-engineered **2** warehouse replenishment batch jobs from legacy **VB6 to C#/.NET**, improving long-term maintainability for inventory workflows supporting more than **3 million customers** across Publix locations nationwide.
- Collaborated with a cross-functional team of **18 engineers and associates** to develop an enterprise Learning Management System supporting **245,000 employees**, leveraging **MongoDB, Azure Blob/File Storage, ASP.NET MVC, and SQL Server** while adhering to organizational security, privacy, and data-governance standards.
- Contributed to the in-house development of a **modern enterprise LMS** that reduced annual training costs by **over seven figures**, replacing third-party platform dependencies with scalable internal solutions that improved operational efficiency.
- Improved engineer productivity by building a **Multi-Agent AI** system of **5 agents** that leveraged the **MCP protocol** to consult documentation across the development cycle in the Supply Chain Logistics Department.
- Developed an Output Token Optimization Agent Skill that surpassed the Caveman skill on **4** benchmarks by **71.1%** on average token output savings and was adopted by the Publix Plugin Marketplace, impacting the development cycles of more than **3000 engineers**.

PROJECTS

iPalo | *Swift, C++, Python, ARKit, ElevenLabs API, ESP32 Microcontroller, LRAs, 3D Print, CAD*

Oct 2025

- Won **1st place** (out of 22 teams) for **Best Use of ElevenLabs** at Knight Hacks VIII by engineering an iPhone 16 Pro Max **LiDAR-powered** assistive device that delivered directional haptic feedback to replace the white cane for blind users.
- Developed an iOS app in **Swift with ARKit** that integrated a **Python** based pipeline to convert voice commands into real-time environmental audio descriptions (~**5 sec** latency) using **Gemini API** and **ElevenLabs API**.
- Prototyped a **LiDAR-driven** haptic navigation system using Linear Resonance Actuators (**LRAs**) and an **ESP32 microcontroller** via Core Bluetooth to provide directional feedback and enhance spatial awareness for blind users.

Face2Learn | *HTML, CSS, JavaScript, Python, MySQL, Gemini API, Figma*

Sep 2025

- Built a Chrome extension using HTML and Tailwind CSS in **under 36 hours** that delivered facial emotion recognition at **65% accuracy**, enabling autistic learners to interpret interactions.
- Trained a **CNN** on a **Kaggle** facial expression dataset using **TensorFlow** with **Haar cascade** detection, accurately classifying seven distinct emotions from live webcam input in real time for efficient, lightweight on-device analysis.
- Enhanced user accessibility by developing non-intrusive YouTube overlays with **Tailwind CSS + Canvas API**, rendering real-time captions and visual cues without disrupting playback, resulting in a seamless, privacy-first learning experience.

ReCueCareer | *Next.js, TypeScript, Python, Flask, Tailwind CSS, Supabase, Auth0*

Jul 2025

- Built a **Python** scraping pipeline using **bs4**, resulting in the extraction of **100+** personalized job postings per user session, by transforming data through **Sentence-Transformers** embeddings and ranking results by semantic relevance.
- Engineered a full-stack dashboard with **Next.js, TypeScript, and Tailwind CSS**, resulting in real-time visualization of tailored job insights, by integrating Python APIs with modular **React components**.

TECHNICAL SKILLS

Languages: Python, TypeScript, C#, Swift, HTML/CSS, Java/JavaScript, SQL

Frameworks/Libraries: Selenium, .NET, Flask, bs4, Tailwind, Next.js, React, PyTorch, Gemini, Scikit-learn, NumPy, SciPy, SentenceTransformers, TensorFlow

Tools/Platforms: Linux, Windows, MacOS, XCode, Visual Studio, VS Code, JetBrains CLion & IntelliJ, GitHub, Azure DevOps, Notion, MobaXTerm, WSL, N8N, Figma, Docker, Supabase, BoldTrail, HubSpot, MySQL, AWS, Oracle DBMS, Vercel, MongoDB, Hugging Face
